## **ABSTRACT**

A template for typst packages

## **CONTENTS**

I Introduction .....	2
II Module reference .....	2

## I INTRODUCTION

This is a template for typst packages. It provides the `id()` function:

```
lib.typ
1 #let id(x) = x typ
```

Here is the function in action:

```
1 one equals #my-package.id[one], 1 = #my-package.id(1) typ
```

one equals one, 1 = 1

## II MODULE REFERENCE

### II.a my-package

- `id()`

```
id(x: any) -> any
```

The identity function

```
1 #my-package.id(1) typ
2 #my-package.id[one]
```

1 one

#### Parameters:

`x (any)` – some parameter
